SUMMARY

IT engineer with experience operating an OpenStack private cloud, automating infrastructure with Terraform and Ansible, and building Golang backends for identity and internal tools. Seeking roles in systems administration, infrastructure engineering, or DevOps.

EDUCATION

B.S. Information Technology, University of Central Florida — May 2026 | Orlando, FL

SKILLS

Infrastructure & Cloud — OpenStack (Kolla-Ansible), Terraform, Ansible, Docker, VMs

Systems & OS — Linux, Bash, PowerShell

Programming & Scripting — Golang, C++, C, Java, C#

DevOps & Tooling — Git, CMake

Security & Identity — Authentication/authorization workflows, session management

PROJECTS & COMPETITIONS

Automated Assignment Grading Tool

03/2024 – Present

- Co-authored a **Golang-based grading pipeline** that ingests multi-language student submissions, executes bash test harnesses, and generates individualized PDF reports with compilation and test results.
- Implemented parsing, validation, and sandboxed execution for C, C++, Java, Go, Python, and Rust submissions, reducing manual TA verification and enabling consistent cross-language evaluation from a single CLI entrypoint in a Linux environment.

Witchlight Engine | Personal Project

05/2026 – Present

- Developing a native C++ engine for desktop and XR on Linux, focusing on modular runtime architecture, modern build tooling, and low-level systems programming with Vulkan and OpenXR.

Horse Plinko Blue Team Cyber Defense Competition – Black

05/2023 – 09/2024

Team Infrastructure Engineer

- Provisioned upwards of 12 vsftpd servers via Terraform and Ansible for **competition-wide scalability**, standardizing Linux host configuration and ensuring consistent remote access patterns for the Red Team.

PROFESSIONAL EXPERIENCE

Director of Infrastructure / Private Cloud Engineer (OpenStack), Hack@UCF

07/2023 – 05/2024 | Orlando, FL

- Maintained and enhanced a **Kolla-Ansible OpenStack** private cloud providing multi-tenant compute, networking, and storage for Hack@UCF services and member projects.
- Authored **Terraform** configurations for **OpenStack** projects, networks, security groups, and instances, and led workshops on **Ansible**, **Terraform**, **VMs**, and **Docker** to train members to deploy and operate services.
- Performed **containerized upgrades** and **configuration tuning** for OpenStack services, improving stability and resource utilization for student workloads.
- Monitored usage, capacity, and incidents on the cloud environment and coordinated maintenance windows and change communication with users.

Tablebound LLC, Junior Developer

01/2024 – 04/2026 | Orlando, FL

- Developing and maintaining a **Golang identity-authentication** backend capable of handling thousands of monthly login and session flows, improving reliability and reducing authentication-related support tickets for a growing user base.
- Built and deployed a **React-based Progressive Web App (PWA)** for a real-time messaging platform, enabling cross-device access with offline support and providing an internal support channel for users.
